DETAILED ACTION

1. Claims 1-10 are presented for examination.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by **Watanabe et al.** (U.S. Pat. 6,853,881).

As per claims 1-10, **Watanabe et al.** teaches a robot system having a teaching device for teaching a robot of positions for performing an operation on an object (see fig. 1), comprising:

Art Unit: 3661

storage means storing positional relation between of the robot and the object (see figs. 1 and 2);

first displaying means (see fig. 1) for displaying a model of the robot on a display device movable around the object with an operator (see fig. 3, element 109);

specifying means for the operator to specify a direction of a present position of the operator with respect to the robot, referring to the model of the robot displayed on the display device (see fig. 3);

second displaying means (see fig. 1) for displaying a three-dimensional model of the object as viewed from the specified direction of the operator on the display device (see fig. 4, element 311, wherein the image being taken as 3D); and

manual operation means for the operator to operate the robot for designating positions for performing the operation on the object (the use of manual operation has been acknowledge by Watanabe 881' "Wu et al., F3 Robot technical manual, 2002, Internet, pp. 1-18."), referring to the three-dimensional model of the object displayed on the display device (see fig. 1-5 and the entire document); a teaching modification device for modifying positions of taught points or orientations at the taught points for performing an operation on an object by a robot (see col. 2, lines 32-36, col. 6, lines 22-29 and col. 5, lines 39-49).
